Assessment Reflection

1. **Time Spent**
   I devoted approximately 16 hours to the completion of this assessment, working in multiple sessions, each lasting around four hours. The work was distributed over several days, allowing me to maintain focus and approach each part of the project systematically.

2. **Online Resources Used**
   Throughout this assessment, I utilized various online resources to supplement my knowledge and assist with specific tasks. These resources included:
   - Front-end software development lectures and corresponding recordings
   - Stack Overflow
   - GitHub
   - Google
   - ChatGPT
   - validator.w3.org
   - commons.wikimedia.org
   - YouTube
   - W3Schools
   - Google Fonts

3. **Assistance from Peers**
   I sought feedback and clarifications from two of my classmates, Jonathan Stickland and Noah Whiffen, during the course of this project.

4. **Instructor Assistance**
   For this specific assessment, I did not seek assistance from any of my instructors, nor did I attend help sessions. However, I have previously found such sessions to be beneficial in other instances.

5. **Difficulty and Confidence**
   From my perspective, this assessment served as an effective test of the knowledge I have acquired in HTML and CSS. In particular, it required the application of newer techniques, such as Flexbox and the CSS Grid model. I believe that I have gained valuable, transferable skills as a result of this project. Furthermore, I feel confident in my ability to tackle similar challenges in the future, applying the techniques and strategies learned during this process.
